we think we are the lucky country but what we really have is dumb luck too much luck more than we know what to do with paul cleary in too much luck paul cleary shows how the resource boom which seems a blessing could well become a curse we have never seen a boom quite like this one under taxed and under regulated multinational companies are making colossal profits by selling off non renewable resources new projects are being rushed through weekly but who is looking out for the public interest as the boom accelerates it will drive the dollar higher and higher and force up the cost of doing business for everyone else industries that involve many jobs such as tourism and education will fade away what happens if commodity prices suddenly collapse as they have in the past or worse when the resources run out many countries before us have been caught by the resource trap a heady period of boom and growth followed by a painful bust paul cleary maps out the pitfalls counts the human and environmental costs shows what has worked overseas and suggests a better way forward one which would turn this one off windfall into a lasting legacy

this is a book about policy change that focusses on a single case study the rise and resilience of the australian policy for real estate carry the text tracks investments of meaning and identity in the australian policies for negative gearing 1987 and the capital gains tax discount 1999 through which successive federal governments inadvertently created scope for a dangerous and inefficient real estate carry trade in the housing sector that has proven resilient to reform for a quarter century considering that carry trades inevitably create the conditions

for their own collapse the historical failure of Australian governments to achieve policy change is a serious issue for the country going forward as they attempt to make their housing sector more stable sustainable and equitable Australian people may need to prepare for potentially dramatic changes to their economic and monetary system the book also raises important implications for understanding the nature and workings of policy change in Australian politics and beyond it is a valuable resource for scholars and students of political theory public policy and Australian politics as well as policy practitioners third sector groups and political parties interested in Australian and international housing policy

the sad story of post war argentina is a timely reminder that rich nations badly managed can gradually become poor could an argentine disaster take place in australia twenty years ago few australians would have given the idea serious attention but for twenty years australians have accepted the case for economic restructuring only to find it almost beyond them to make it happen this is only the most recent experience australia and argentina share the authors point to parallels extending back into the last century when european immigrants and capital flowed into both antipodean societies at the same time for like reasons and with similar results no other society shares so much of its economic history with australia we can ill afford to ignore the lessons of the argentine tragedy certain political characteristics have thus far held australia back from argentine extremes but both countries have failed to industrialize efficiently and both economies still depend heavily upon politically hard pressed primary industry if australia continues to subordinate the interests of its dynamic industries to those of the more politically influential sectors in argentine fashion then so runs the powerful argument of this book australia faces an argentine future

this paper estimates the effects of the mining boom in australia using a large scale structural macroeconometric model aus m we estimate that the mining boom boosted real per capita household disposable income by 13 per cent by 2013 the boom has contributed to a large appreciation of the australian dollar that has weighed on other industries exposed to trade such as manufacturing and agriculture however because manufacturing benefits from higher demand for inputs to mining the deindustrialisation that sometimes accompanies resource

booms the so called dutch disease has not been strong
